

# Bravo

# It came from far far away...

to help you install and  
distribute AS/400 objects  
from the PC.

Introducing Bravo Express, the first software of its kind, from Symtrax. Bravo will let you package AS/400 objects, software and updates in a PC format. Distribute via e-mail, FTP, website download or even drag and drop! With Bravo, the galaxy's the limit.

Why use Bravo?

Drag and Drop AS/400 objects  
from one machine to another.

Package and Distribute AS/400  
objects to remote users

Save Money – Eliminate cartridges  
and AS/400 CD-ROMS

Leverage the Internet to distribute  
software and other objects

Take advantage of sophisticated  
PC and AS/400 technology to work  
faster and save money

# Install and distribute AS/400 objects from the PC

## A Revolution That Is Long Overdue

Bravo Express by Symtrax is the first software product that will allow you to create install packages from AS/400 objects and distribute them easily to remote locations or customers via email, the web, PC CD-ROM or otherwise.

With Bravo's easy-to-use PC interface, you can view AS/400 objects and their attributes by pointing and clicking. AS/400 objects can be easily packaged for installation to other AS/400s by simply dragging and dropping.

To install or update software on an AS/400 that is connected to your network, just drag and drop objects from one system to another.

Remote users can use the FREE Bravo Reader to restore Bravo files to their AS/400s.

### Full Access

All AS/400 objects that are normally accessed via the AS/400 WRKOBJ command, whether they be programs, physical or logical files, display or message files, may be accessed and packaged using Bravo Express.

### Stop Wasting Money!

Until now, what options have been open to companies running AS/400's and software firms wishing to distribute AS/400 objects? One option is to create AS/400 cartridges.

These are expensive and the size and format can vary depending on the particular AS/400. Also, postage costs can add up when distributing objects like this, especially if it is just a routine update or PTF!

Another option is to burn software onto an AS/400 CD-ROM. This is a long and costly process, as special software and hardware are needed.

Use Bravo to package and distribute objects any way you want: on a PC CD-ROM, via e-mail or for download on the web!

Once an Administrator has received your Bravo file, he/she may install your software on the AS/400(s), no matter whether the connection is via twinax, TCP/IP, Microsoft SNA Server or another method.

### Built In Compression

Bravo has a powerful built-in compression tool, so that data may be "streamed" to the AS/400, saving disk space and speeding up transfer. When using the "streaming" option, save/restore operations may be cancelled at any time with a simple click of a button.

As a safety precaution, Bravo can also backup AS/400 objects already existing in the library where the installation takes place.

### Make Life Easier!

Think about the possibility of being able to update or install objects to several AS/400's at the same time by just pointing and clicking from one single PC interface. Bravo can also make it easier to locate those hard to find AS/400 objects by running multi criteria search routines, which can then be saved for future use.

Every company can find a different use for Bravo Express. For example, you may want to quickly and easily move objects from a development AS/400 to one or one hundred production AS/400s.

### Bravo Express, just a Beginning

Bravo Express is the first member in a family of software products that will facilitate the distribution of AS/400 objects.

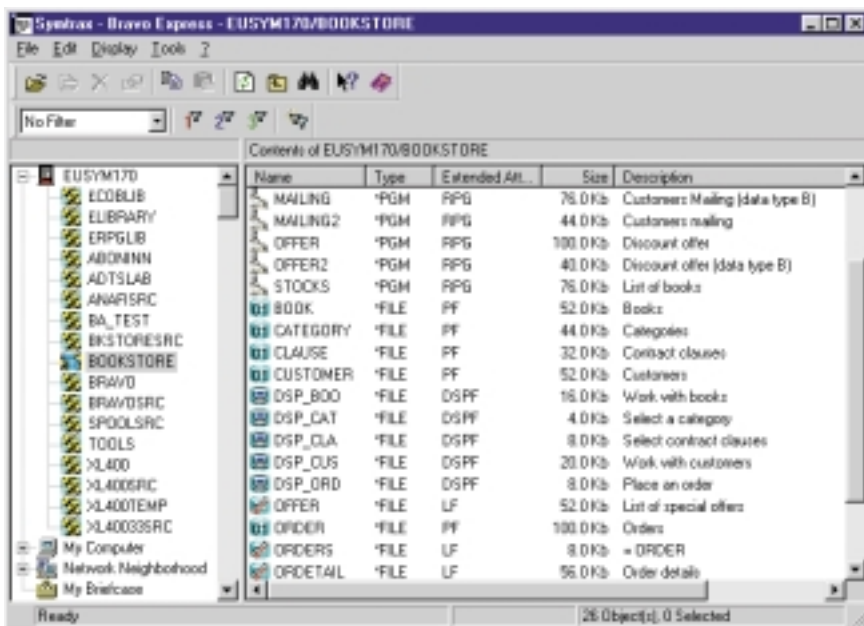

Bravo is the perfect solution for both companies running AS/400's and for AS/400 software editors who need to distribute objects (software, PTFs, libraries ...) in a rapid and cost-effective manner.

Bravo Express is composed of two parts: the Bravo Express software and the Bravo Reader. The Bravo Express software is used to create Bravo Files; the Bravo Reader is used to open these files and install them on the AS/400. The Bravo Reader does not require any software residing on the AS/400.

The Bravo Reader is available for **FREE DOWNLOAD** from the Symtrax website, allowing anyone to install Bravo Files created with Bravo Express.
