DataQ400

A perfect balance
between two worlds.

Are you looking for a quality, cost-saving way to generate company documents from your AS/400?

DataQ400 is a revolutionary solution that takes advantage of the strengths of both the AS/400 and the PC.

Now create any document, such as purchase orders, invoices and checks, quickly and easily and do away with costly pre-printed forms.

Why Use DataQ400?
Improve the quality of your key company documents.

Eliminate pre-printed forms and save money.

Avoid costly and resource-consuming AS/400-based forms solutions.

Create your AS/400 forms with ease using DataQ400

A modern, cost-effective solution for AS/400 forms

Consider DataQ400:

- Forms are created on the PC in popular applications such as Microsoft Word or Excel
- Data is sent from AS/400 application to PC applications
- Print invoices, purchase orders, checks, letters and other documents with ease
- Eliminate costly pre-printed forms, save money and create as many forms as you need
- Protect AS/400 resources by letting the PC do the work

Execute and manage PC applications from the AS/400

- Call any executable from the AS/400, pass parameters and verify results
- Synchronize PC jobs with those of the AS/400
- Transfer files from the AS/400 to the PC

DataQ400 - A perfect balance between two worlds

The AS/400's strength lies in its capacity to store huge amounts of data and in the reliability of its applications. The AS/400 isn't renowned, on the other hand, for its ability to create dynamic and impressive documents. That's where the PC comes in. PC applications such as Microsoft Word and Excel allow you to add logos, backgrounds, fonts and calculations, all of which AS/400 applications are not especially suited for.

DataQ400 provides the bridge between these two worlds.

Big savings

Chances are, if your company has a large variety of forms, you could save money with DataQ400. Instead of purchasing pre-printed forms for your invoices, purchase orders and form letters, create all of your forms in PC applications. When a change or new form is needed, you can implement it quickly and easily, without spending a penny.

Conserve your resources

As well as money, you can economize your AS/400 resources by sending print jobs to the PC to be processed. The work is no longer done by the AS/400 but by the PC.

A solution that doesn't require a revolution in your information structure

With DataQ400, you take advantage of your existing investments. DataQ400 does not require the purchase of additional hardware such as special servers or printers. Once your form has been created, send to any printer on the network.

An Intelligent tool

DataQ400 is not just a simple mapping and transfer tool. It is capable of analyzing data and depending on conditions you define, may generate differing results in the PC application. These may include calculations, the addition of phrases or paragraphs, images, etc.

Once DataQ400 has sent data to the PC, the job isn't over. DataQ400 monitors the outcome of the job. If a problem arises on the PC, a message will appear on the AS/400 alerting the user or system administrator. The user then has the option of either cancelling the job or restarting where it left off.

Other added-values

With DataQ400's special DataCommand function, you can call any PC executable from the AS/400 scheduling device. For example, the AS/400 can run pre-scheduled XL400 queries.

Use the DataTransfer function to replicate AS/400 information on PC database applications.

Painless installation

In less than three minutes, libraries are restored to the AS/400 from the PC. DataQ400 can communicate with any AS/400 independent of the connection type: TCP/IP, APPC, SNA Server, etc.
