FormScape Software

FormScape software is a critically acclaimed Enterprise Output Management (EOM) system used by thousands of clients daily in more than 22 countries. FormScape brings together comprehensive solutions that successfully empower business communications, enabling organizations to perform everything from delivery of simple business documents and reports to satisfying the most sophisticated B2B and e-commerce information management needs.

In the past, the lack of common standards between IT systems has prevented a faster adoption of this type of technology. FormScape software represents a new generation of Enterprise Output Management technology by providing a fully-integrated solution. It is a dynamic document creation, management and delivery solution.

FormScape takes print data streams from legacy mainframe and other host computer systems, processes the data and distributes the output when and where it is required, without reprogramming the original application
